

The province of Córdoba has an extension of 13.769 km<sup>2</sup> and, according to 2010 data, a total population of 805.857 people. We know also that the number of women is 409.999, 315.109 of them are between 15 and 49 years old.

This year were born 7.988 children, although 26 of them finally died during the year. The number of people dead was 6.627. We know that 14.588 people left Córdoba, while 12.050 came from outside to live in the province.

Calculate the following:

- Natural growth rate
- Net migration
- Real growth
- Mortality rate
- Fertility rate
- Birth rate
- Infant mortality rate
- Density of population

Write the development of the operations, to avoid forgetting any step.

You have more solved problems on the web to practice.

Have a nice weekend!
